Automatic Meeting Minutes Generator

Using Natural Language Processing

Project Title: Automatic Meeting Minutes Generator

Presented By:

Amrutha Varshini - 2403A52225

Ayesha Farheen - 2403A52243

Anognya Reddy - 2403A52244

B-Tech-CSE[AIML]

Batch:09

Problem Statement

- Meetings are often long and difficult to document manually.
- Important decisions, tasks, and deadlines may be missed.
- Manual note-taking consumes time and effort.
- Organizations need an automatic intelligent system to record meetings.

Objective

- Convert speech into text automatically.
- Generate a short and clear meeting summary.
- Extract:
  - Action items
  - Responsible persons
  - Dates and deadlines
- Provide structured meeting minutes in real time

Stakeholders

- Corporate business meetings
- Online classes and seminars
- Conference discussions and panels
- Team collaboration and task tracking
- Compliance and documentation in organizations

System Workflow

Step 1: Speech input from meeting audio

Step 2: Speech-to-Text conversion

Step 3: NLP processing

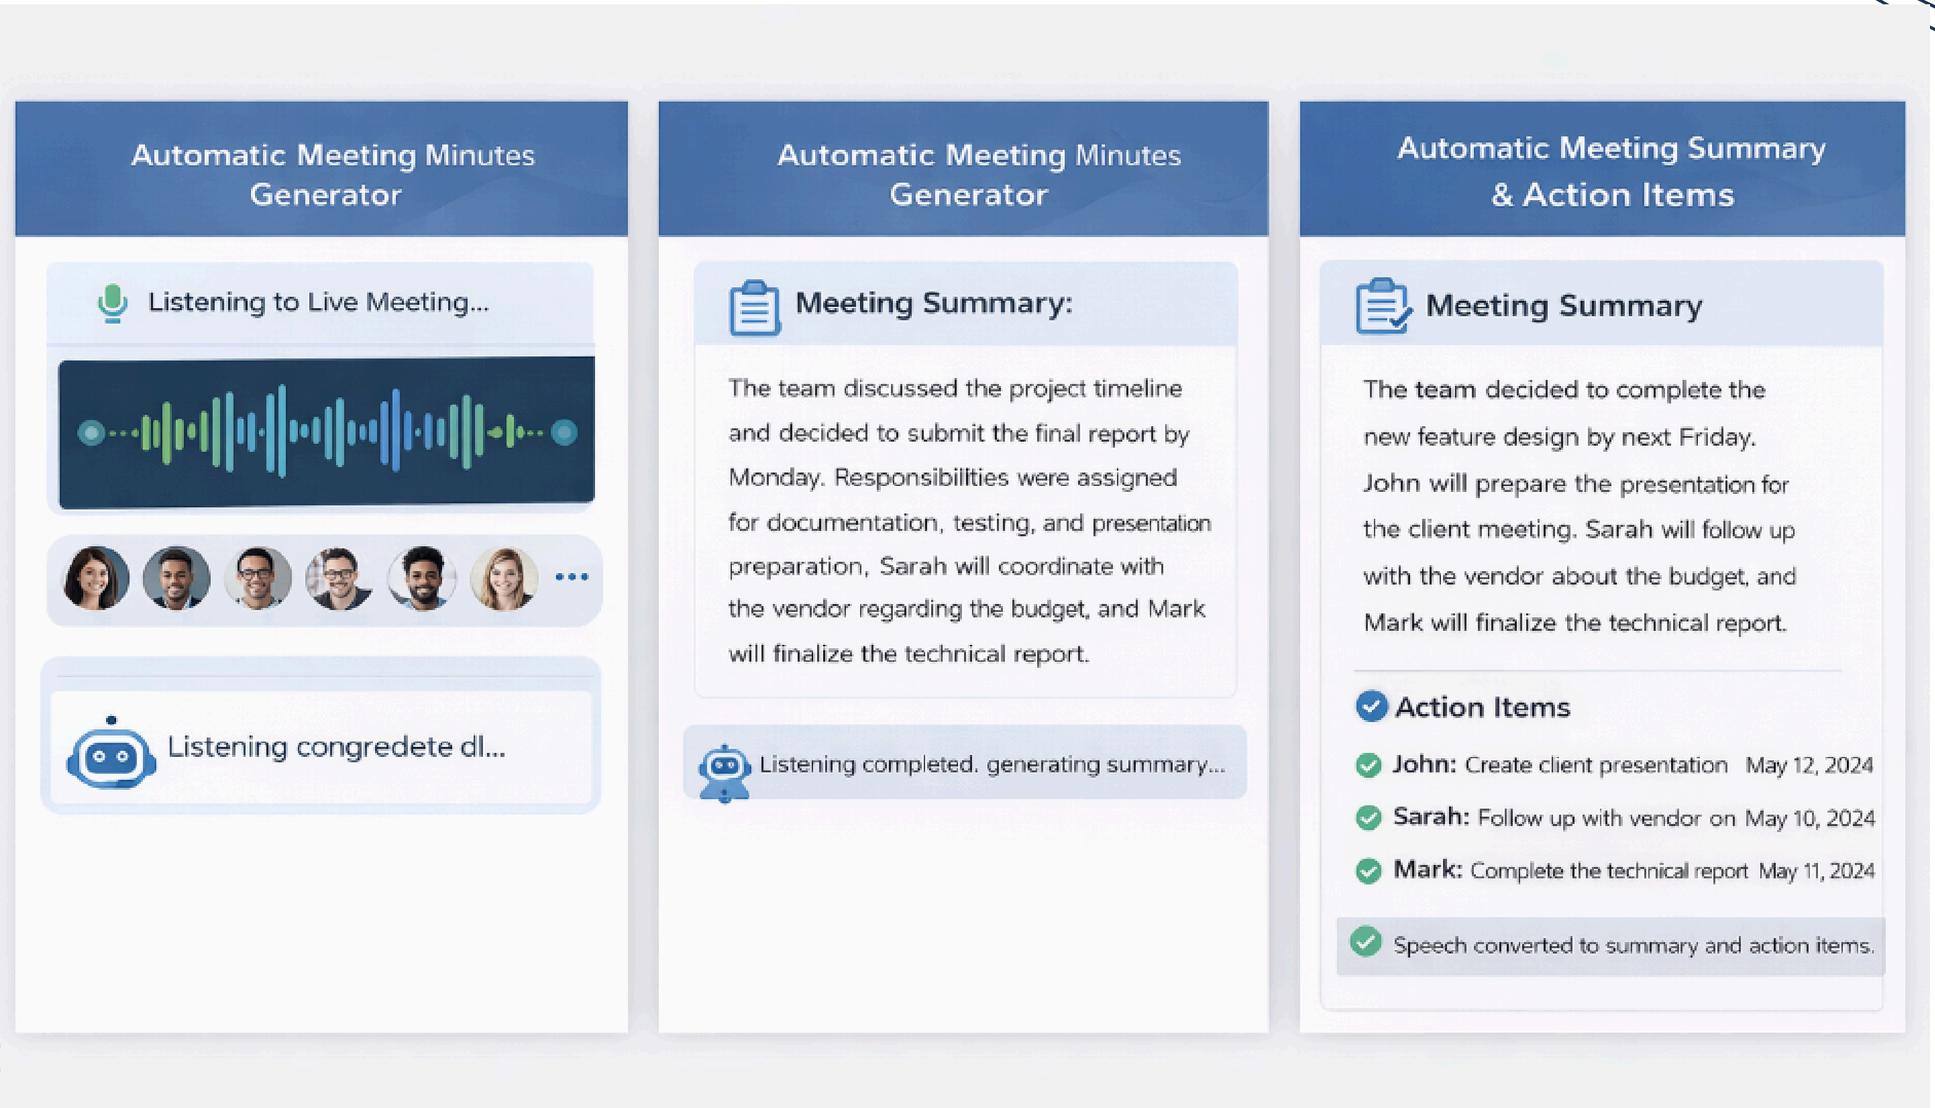
- ext summarization
- Named Entity Recognition
- Action item extraction

Step 4: Generate final meeting minutes and task list.

Technologies Used

- Python – Core programming language
- Whisper / Speech Recognition – Converts speech to text
- spaCy – Named entity recognition (names, dates, tasks)
- Hugging Face Transformers – Text summarization
- Pandas – Structuring and storing meeting data

Prototype Sample View



Conclusion

- Reduces time and effort in manual documentation
- Automatically captures key decisions and tasks
- Useful AI-based productivity solution
- Strong potential for real-time intelligent meeting systems

Thank You
